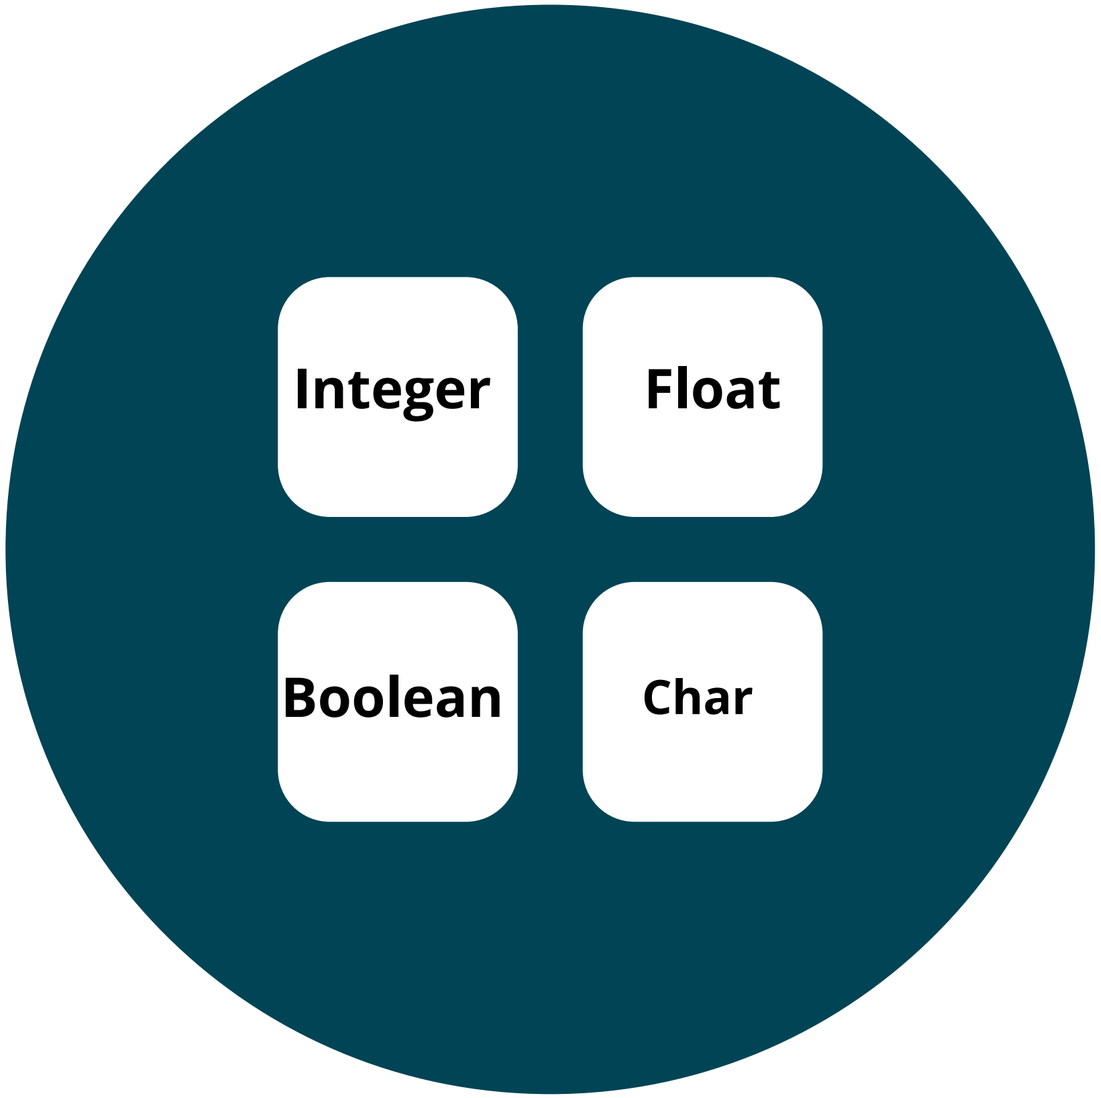
RUST PROGRAMMING

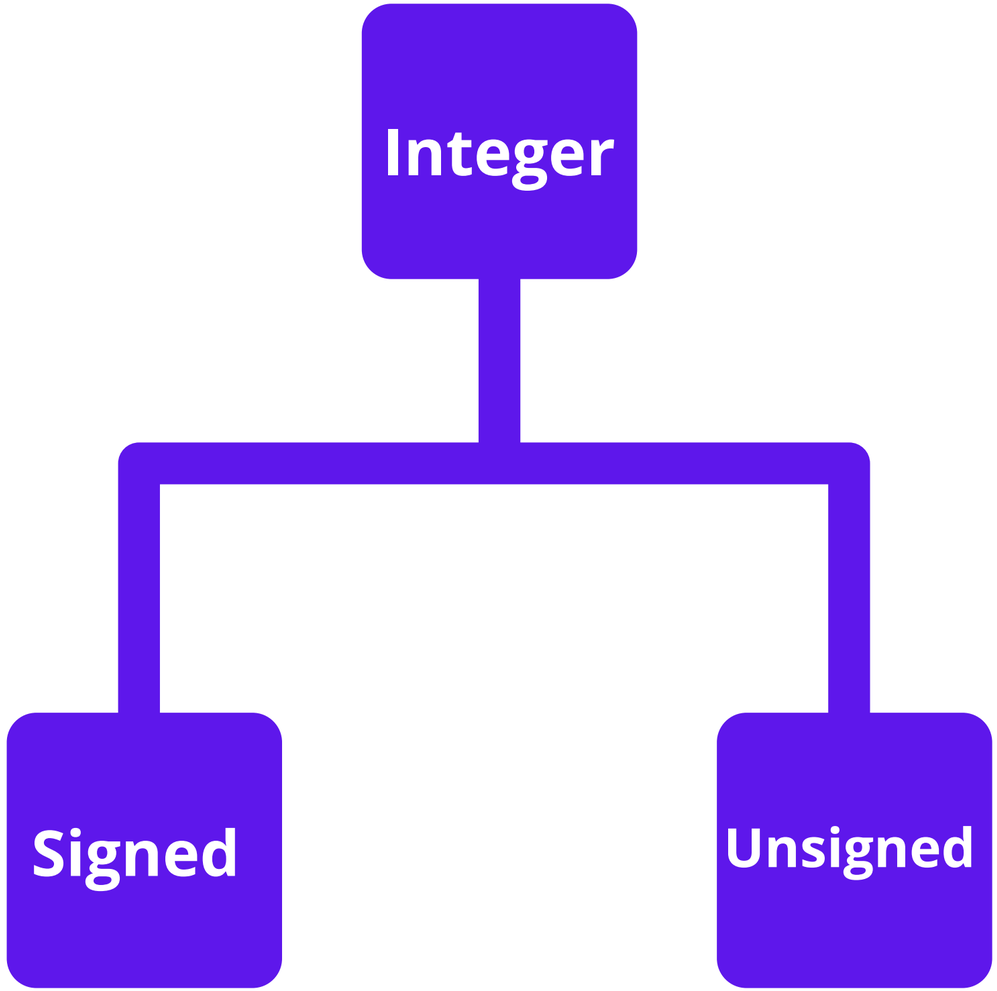
Presentation by

Surendra Varma Pericherla

Data Types in Rust



Integer Type



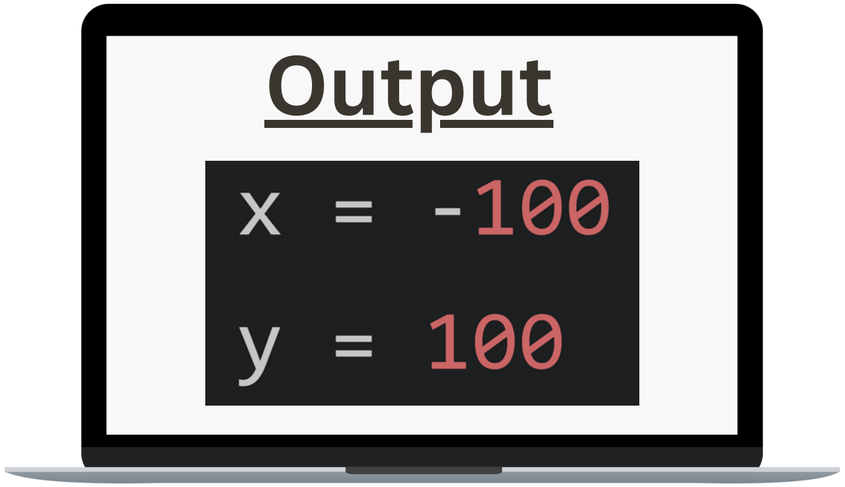
Signed Integer Type

```
let number: i32 = 100;
```

Signed Integer Type in Rust

```rust
fn main() {
    // Signed integer type
    let x: i32 = -100;
    let y: i32 = 100;

    println!("x = {}", x);
    println!("y = {}", y);
}
```



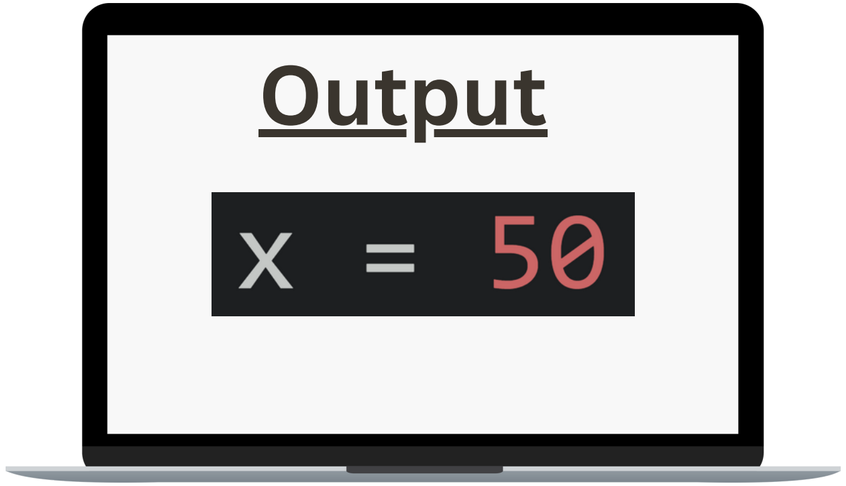
Unsigned Integer Type

```
let number: u32 = 50;
```

Unsigned Integer Type in Rust

```rust
fn main() {
    // Unsigned integer type
    let x: u32 = 50;

    println!("x = {}", x);
}
```



Unsigned Integer Type in Rust

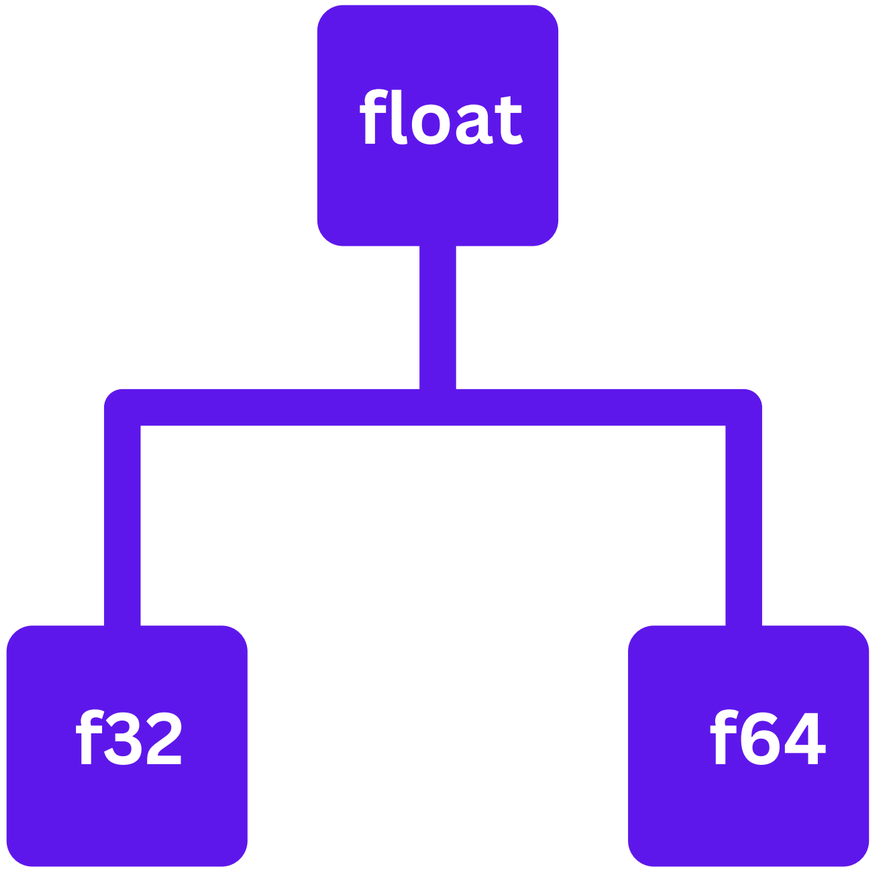
```rust
fn main() {
    let x: u32 = -50;

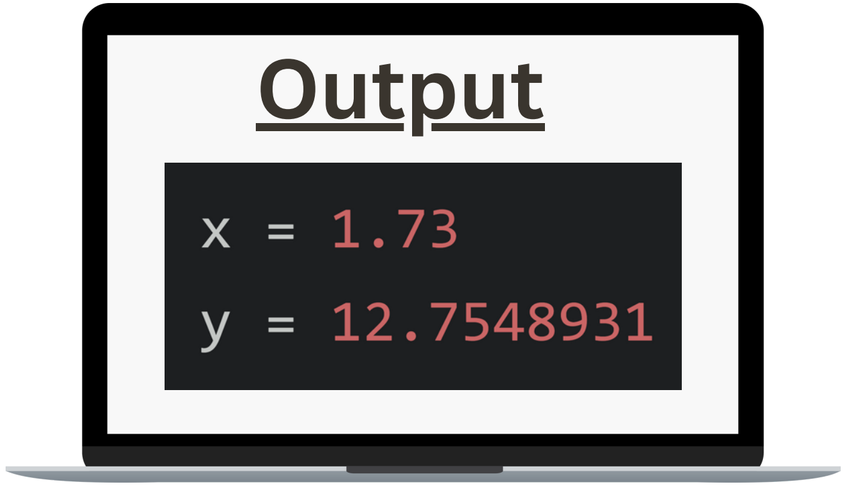
    println!("x = {}", x);
}
```

Categories of Integer Data Types in Rust

Size	Signed	Unsigned
8-bit	i8	u8
16-bit	i16	u16
32-bit	i32	u32
64-bit	i64	u64
128-bit	i128	u128

Floating Point Type



Floating Point Type


```rust
fn main() {
    // f32 floating point type
    let x: f32 = 1.73;

    // f64 floating point type
    let y: f64 = 12.7548931;

    println!("x = {}", x);
    println!("y = {}", y);
}
```
